EXPERIENCE

MHR, Nottingham, UK — *Web Application Developer*

January 2017 - January 2018

Whilst at MHR I worked on a global enterprise web app, which was in the process of being launched in the USA and across Europe. The app 'people first' is a groundbreaking mobile first application that changes the way people work. Being a UI on the team meant that my main tasks for the 2 week sprints included - but were not limited to - building reusable UI components, unit testing and plenty of QA meetings for future sprints.

GHO, Sydney, NSW— *Front end web developer*

April 2016 - August 2016

I was hired by GHO on a contract role to work on a large scale website redesign and rebuild. Working alongside talented creatives, programmers and managers, I was passed on the designs, which I then converted to reusable assets to be used site wide. Alongside the main project, I updated and maintained a range of GHO's clients websites and EDM's.

Gsquared, Sydney, NSW— *Web developer*

February 2016 - March 2016

I'm was employed by Gsquared for a month to help them with their huge workload. Working to produce and maintain an excellent portfolio of work and to help them to grow their business even more. Working on a variety of projects, extending from bespoke WordPress builds, Laravel PHP framework maintenance to EDMs.

Freelance, Lincoln UK — *Web developer*

October 2015 - January 2016

Working closely with other developers across Lincolnshire to produce high quality websites that will be seen by an international audience, along with maintaining websites with previous websites.

SKILLS - Developer

HTML, CSS, Javascript/ Typescript, Angular 2/5, Scss, Responsive Design, NodeJS, ExpressJS, Mongoose, Git, Agile & VSTS.

TESTIMONIAL

"Sam joined G Squared to fill a temporary vacancy whilst one of our team members was on extended leave. It became quickly evident that Sam was a very talented web designer and front-end dev. He immersed himself immediately in our projects, analysing the front-end & UX and adding value to each project he worked on. In one particular project, we relied on him solely for the design, UX and general theming and the client was overjoyed with the outcome."

George Pappas, Director at G Squared

LATEST PROJECTS

People First —people-first.com

Working with 20+ UI Developers across smaller feature teams, in an agile manner, we were tasked to build small reusable components within JavaScript framework Angular (2+). Throughout my time at MHR I increased my knowledge on both Javascript/ Typescript and the importance of Unit Testing. Working with the jasmine framework, we made sure any code that was written was validated by unit testing. When I joined the team, the app had been written in AngularJS, which exposed me to the importance of component migration and refactoring.

Built throughout 2017

REST Industry Super —rest.*com.au*

REST industry super is one of Australia's largest superannuation companies. My role as a FE Developer was to provide HTML, CSS and jQuery modular assets which were to be inputted into the Kentico CMS. Working alongside other Developers within agile sprints this project was deployed in August 2016.

Built in August 2016

ForAisha— *foraisha.com.au*

ForAisha is a global halal baby food product, which needed their site being built into a better CMS, WordPress. This was challenging as there are over 9 different templates across the site, with a certain timeframe/ budget in place. These templates incorporated different design aspects along with making sure the content can be changed in the CMS, by using custom fields, not just the main content area. With the use of 3x retina graphics across the board, it is now pixel sharp for the latest phone screen technology. Of course, the site is also responsive.

Built in December 2015

Healthwatch Lincolnshire — *healthwatchlincolnshire.co.uk*

In order to provide a more flexible platform for their targeted growth and visibility within the county, Healthwatch Lincolnshire approached LMA to design and develop the framework for a new, mobile-friendly website to represent their brand online.

Built in November 2014

TESTIMONIAL

"Sam worked as part of our project team to complete a major project in delivering a multi-browser, multi-device responsive website for a major financial services client. Sam is a solid front-end developer who has a great attitude towards work assigned to him and is a great team player in achieving a common goal.

The project was quite aggressive whereby we needed to deliver a large volume of work within a tight timeline. Sam's dedication and resilience in working many late nights week after week to ensure targets are met is highly commendable and appreciated. Sam would be a positive addition to any team and he would always give his best."
